

We have committed to reducing carbon emissions

As one of Australia's largest energy generators and retailers, we have an important role to play with climate change. TRUenergy was the first energy company in Australia to commit to a Climate Change Strategy in 2007 with a commitment to reducing our carbon emissions by 60% by 2050. We have built Australia's most efficient gas fired power station and we offer our customers practical energy efficiency solutions to help reduce their carbon footprint. It is our commitment to investing in a better environment, today and tomorrow.
